

# Indian Materialism – Impure Works

By Shomit Sirohi

# I. Statistical Works with Geometry

Making types of patterns with geometry added – this would mean a fuzzy line which is then geometric to poverty and such units of low and high wages over a month, which is also over a year, something like a complex change in patterns of landowning and peasant struggles

linked to a working  
class piece-rate.

## II. Model of Culture

Like chemistry in D.D.  
Kosambi, so geometric  
shapes and drawings  
integrate with  
geometric price-series  
while being  
experimental.
